## SUMMARY

Senior full-stack engineer with 5+ years in React, Next.js, Node.js, TypeScript and PostgreSQL. Takes products from technical proposal to production: designs the architecture, builds across frontend and backend, and owns what ships. Strongest on business-critical systems, including cross-company integrations, event-driven microservices and high-volume pipelines that have to stay reliable. Trusted with the backend for Viome's Japan launch with century-old Ezaki Glico.

## PROFESSIONAL EXPERIENCE

**Senior Software Engineer** | **Invictus (Client: Viome)** Oct 2025 – Present

- Architected and led delivery of the Node.js/PostgreSQL backend for mRNA HEALTH TRACKER, Viome and Ezaki Glico's Japan service and the first international launch of Viome's partnership model; authored the technical proposal.
- Built registration REST APIs and a dynamic questionnaire engine that generates personalized health questions for each user.
- Synchronized partner events between Viome's US platform and Glico via Azure Service Bus, then generalized the design into a reusable multi-partner microservices platform; Dockerized and deployed to Azure via CircleCI.
- Own Viome's US direct-to-consumer storefront (Next.js on headless Shopify) end to end: checkout extensions, custom pixel, GraphQL storefront integration, Statsig A/B experiments and Fullstory analytics.

**Software Engineer III** | **Walmart Global Tech India** Feb 2024 – Sep 2025

- Built a resilient React/TypeScript auto-save for FeedbackAlly, Walmart's internal survey platform, lifting form submissions **22%** and eliminating partial-response data loss.
- Shipped survey media upload, increasing detailed qualitative responses **15%**; added Redis caching so repeat survey requests are served from memory.
- Built AI Data Catalog visualizations that cut performance-monitoring time **50%**.
- Owned core platform features with **zero production outages** and received the **Firefighter Award** for rapid resolution of critical production issues; contributed to the architectural roadmap with principal engineers.

**Software Development Engineer** | **Klenty** Sep 2022 – Dec 2023

- Built the email deliverability module in Node.js and MongoDB, processing **1M+ transactions/day at 99.8% success** across CRM-integrated campaigns.
- Reduced average API response time **35%** under high concurrency by restructuring MongoDB queries and adding targeted indexes.
- Decoupled critical components into independent microservices communicating over RabbitMQ, letting teams deploy without blocking each other.
- Raised Jest coverage from **30% to 85%**, reducing production bugs **40%**.

**Product Developer** | **SurveySparrow** Mar 2021 – Aug 2022

- Led the refactor of the main application into modular, reusable components and services, cutting feature development time **20%**.
- Diagnosed and shipped full-stack fixes for live customer escalations within SLA, sustaining **95% CSAT**.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3
**Frontend:** React.js, Next.js, Redux, Headless Shopify, Responsive UI, Component Architecture
**Backend:** Node.js, Express, REST APIs, GraphQL, Microservices, Event-Driven Architecture
**Messaging:** RabbitMQ, Azure Service Bus
**Databases:** PostgreSQL, MongoDB, MySQL, Redis, Query Optimization
**Cloud & DevOps:** Azure, Docker, CircleCI, CI/CD, Git, GitHub, Vercel
**Practices & Tools:** System Design, Jest, TDD, Statsig (A/B Testing), Fullstory, Strapi, Agile/Scrum

## EDUCATION

**B.Tech, Information Technology** | **Government College of Technology, Coimbatore** 2017 – 2021
