

Jeevitha Venkatesan

Senior Software Engineer

Professional Summary

Senior Software Engineer with **4+ years of experience** building scalable, high-performance web applications. Proven track record of achieving **99.9% uptime**, **reducing API latency by 35%**, and engineering backend systems that process over **1 million daily transactions** in both enterprise and product-led environments.

Work Experience

- Software Development Engineer III** Feb 2024 - Present
Walmart Global Tech
Tech stack: *React.js · Node.js · MongoDB · Microsoft Azure · Data Catalog*
 - Led the technical **design and delivery of core features**, mentoring the FeedbackAlly team on observability best practices to achieve **99.9% uptime** and **reduce MTTR for production bugs by 30%**.
 - Drove a key **architectural improvement** by designing and implementing a new **caching layer** with Redis, **reducing database read operations by 40%** and directly **cutting monthly infrastructure costs by 20%**.
 - Engineered a resilient **auto-save feature** using frontend debouncing and backend transactional updates, **increasing form submission** rates by 22% while guaranteeing data integrity against race conditions.
- Software Development Engineer** Sep 2022 - Dec 2023
Klenty
Tech stack: *TypeScript · React.js · Express.js · MongoDB · Unit Testing*
 - Engineered a **high-throughput** email deliverability microservice in **Node.js** and **MongoDB** that handled 1M+ daily transactions, achieving a **99.8% success rate** by optimizing connection pooling and query batching.
 - Optimized backend **API performance** for **high-concurrency** operations by restructuring MongoDB queries and implementing **strategic indexing**, **reducing average API response time** by 35%.
 - Authored and presented a **technical proposal** that secured engineering buy-in for key infrastructure upgrades, enabling the **platform to scale** from 5M to over **1M daily transactions** while maintaining performance SLAs.
- Product Developer** Mar 2021 - Aug 2022
Survey Sparrow
Tech stack: *JavaScript · React.js · Hapi.js · PostgreSQL · Sequelize.js*
 - Spearheaded a major refactoring initiative by establishing new **coding standards** and conducting **peer code review** sessions, resulting in a **modular architecture** that reduced new feature development time by 20%.
 - Served as a key engineer on the **Customer Active Response Team**, resolving complex full-stack issues to achieve a **95% customer satisfaction** rating and directly contributing to a **15% improvement** in user retention over two quarters.

Education

- B.Tech - IT** 2017 - 2021
Government College of Technology
Information Technology

Technical Skills

Languages and Frontend:

- React.js
- JavaScript (ES6+), TypeScript
- HTML5/CSS3, Bootstrap

Backend and Architecture:

- Node.js, Express.js
- Microservices, API Design, Redis

Databases and Performance:

- PostgreSQL, MongoDB, MySQL
- Performance Tuning, Strategic Indexing

Testing and Quality:

- Jest, Test-Driven Development (TDD)
- Unit & Integration Testing

Cloud and DevOps:

- Git, CI/CD Pipelines, Agile/Scrum
- Microsoft Azure

AWARDS

Firefighter Recognition

Awarded for exceptional ownership in **critical incident response**, directly contributing to **high system uptime** and **improved stability metrics (MTTR)**.

Learning Champion

Recognized for proactively **mentoring junior engineers** and hosting **knowledge-sharing** sessions on modern API performance patterns.
